

the second information allows the content of the first information to be established. All that Hulbert teaches is that the power level is increased or order is inverted for further transmissions after an error is detected. The compensation referred to by the Examiner is for FUTURE transmissions. There is no retransmission of the erroneous information or any error correction of that information. There is not even any teaching or suggestion that later transmitted information relates to the first information as indicated by the Examiner.

The other rejections would appear to be moot in view of the foregoing. Nevertheless, Applicant reserves the right to assert further arguments with respect to those rejections at a later date. The Examiner's attention is particularly directed to new claim 21, which emphasizes the real time aspects of the invention, not dealt with in the prior art.

The prior arguments are incorporated herein by reference.

Applicant respectfully submits that he has answered each issue raised by the Examiner and that the application is accordingly in condition for allowance. Allowance is therefore respectfully requested.

<b>CERTIFICATE OF MAILING</b>	
I hereby certify that this correspondence is being deposited this date with the United States Postal Service as first class mail in an envelope addressed to	
Commissioner for Patents Box RCE Washington, D.C. 20231
